

Day11 Mcq

Parasitology

- 1)The first intermediate host of Paragonimus is : (Cyclops, Pirenella snails, Semisulcospira snails).
- 2)Reservoir hosts of Paragonimus are: (Carnivorous animals, herbivorous animals, rodents).
- 3)The cercaria of Paragonimus is: (Clopocercous , leptocercous microcercous).
- 4)Encysted metacercaria in crayfish is the infective stage of Paragonimus.
(True – False)
- 5) As regards Paragonimus westermani, all are true except
 - a. The encysted metacercaria excysts in the duodenum
 - b- Cysts develop around metacercaria in lung tissue.
 - C .Eggs are coughed out with sputum
 - d- Praziquantel is drug of choice.
- 6) The best methods for diagnosis of acute infection with Paragonimus is:
 - A. Sputum analysis
 - B. Stool examination
 - C. Immuno-diagnosis by complement fixation test and ELISA
 - D. Test to exclude pulmonary TB
- 7) Helminthes infecting humans through eating fish are:
 - A. Heterophyes heterophyes.
 - B. Paragonimus westermani
 - C. Diphyllbothnum latum.
 - D. Capillaria philippenensis
 - E. All of the above
- 8) a male patient, 30-year-old, from Korea, suffering from cough, developed thefollowing: fever, has: hemoptysis, anorexia, night sweats since 2 months, probably has
 - a- Clonorchis sinensis
 - b- Paragonimus wastermani
 - c- Taenia d- Fasciola hepatica
- 9) Habitat of Paragonimus is
 - a- Liver
 - b- Blood vessels

c- Lung

d- Small intestine

10) Hepatosplenomegaly & cough in paragonimiasis by:

a-Egg

b- Miracidium

c- Cercaria

d- Adult

11) coughing of blood is called:

a- hematemesis

b- hemoptysis

C- hematochezia

d- hematuria

12) All of the following are true about egg of paragonimiasis EXCEPT:

a- mature

b- immature

C- oval

d- operculated

13) all of the following are intermediate hosts of paragonimus EXCEPT:

a- crabs

b- *Prinella conica* snail

c- *SEMISULCOSPIRA* Snail

d- *Oncomelania* snail

14) *Paragonimus wastermani* is characterized by being:

a- Separate sex

b- organ of fixation is bothria

c- 2 intestinal ceca fused together at the posterior end.

d- require two intermediate hosts.

15) Dermatophagoid is characterized by all of the following EXCEPT:

a- 4 pairs of legs in the adult and nymph

b- 3 pairs in the larva.

c- Not parasitic

d -prefer dry areas as mattress, crepts, furniture & pillows

e- feed on human skin scales & pollens

16) Life span of Dermatophagoid is:

a- 1-3 weeks

b- 1-3 months

c- 1-3 years

d- 1-3 decades

17) Mode of infection of Dermatophagoid is:

a- Inhalation of dust contain feces

b- Ingestion of dust contain feces

c- penetration of skin by adult feces

18) Skin eater mite can cause all of the following EXCEPT:

a- allergic rhinitis

b- allergic conjunctivitis

C- atopic dermatitis

d- sputum discharge

e- bronchial asthma
